

Belt Drive Air Handlers

Objective:

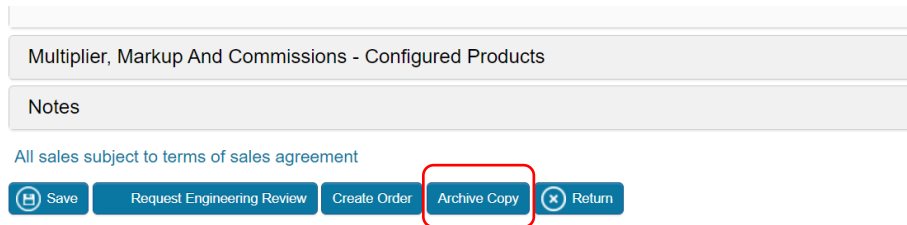

On Wednesday (09-07-22) E-Select will be updating the Air Handler Family, Belt Drive Air handlers. The update will include the following:

Item(s) to be added/updated:

- Updated pricing for changed/added options and features
- Added C and X to Model for Belt Drive and Direct Drive respectively (Ex. 'SHW' --> 'SHWC')
- Increased Coil performance ranges
- Added new accessory features including spring isolators, thermostats and field mounted accessories for all units
- Updated Electric heat offering for all units
- General speed and performance improvements to all models

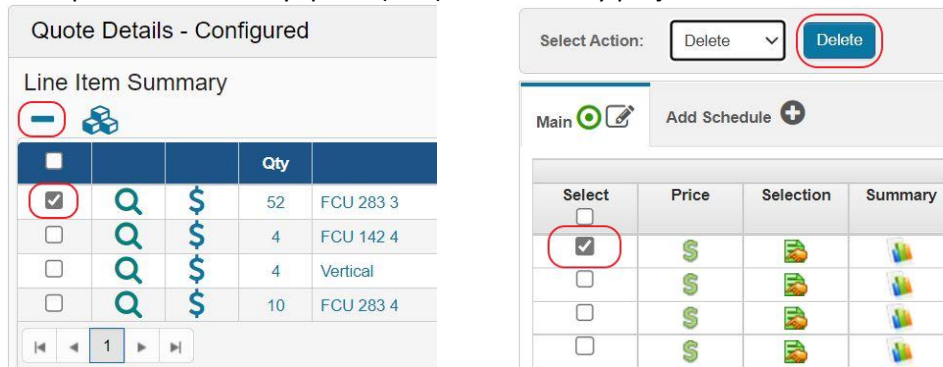

Next Steps:

If you have any active quotes with the SHW or WHD product on them, please save an archived version so any agreed pricing is not lost. To do so select the 'Archive' button at the bottom of your quote in E-Select. Subject to standard quote terms and expiration.

If you are experiencing any issues with existing Belt Drive units, some steps to take would be:

1. Remove the corrupted unit from any quote (first) and from any project

2. Make a new selection by selecting a new model from the project schedule.
